## **Provider DNA Program**

\_\_\_\_\_ **is now offering a unique** Professional DNA Program that includes scientifically proven genetic testing, expert genetic counseling, and personalized recommendations for diet, supplementation, and lifestyle. Testing is offered at reasonable prices that can greatly reduce the health and mental risks that are caused or contributed to by mutated genes.

**Privacy is guaranteed for your DNA data by the CLIA approved Testing Lab.**

The \_\_\_\_\_ DNA Program first identifies mutations of your genes (DNA) that can put you at an increased risk of health conditions such as depression, anxiety, excess body fat, poor sleep, low energy, ADD, ADHD, dementia, heart disease, declining memory, diabetes, premature aging, a weak immune system, and many more.

**Expert Consultations are then provided to each participant.** Since your genetic profile is unique to you, only one-on-one consultation with one of our Genetic and Nutrigenomic experts can truly determine how best to address any genetic weaknesses found in your profile.

Dietary, supplementation, and lifestyle recommendations are made from our team of experts using your unique genetic profile, health history, symptoms, and personal goals. Education is provided on an ongoing basis.

*Genetic Guided Nutritional Supplementation specifically addresses the unique biochemical deficiencies based on the individual's unique genetic make-up. While we all have the same genes, we each have genetic variants that can impact what we look like, what we're allergic to and what our bodies need to thrive.*

**Your Family.** Mutated genes can put your children at risk for many of the health conditions mentioned above. When identified early, preventive programs featuring genetically designed dietary recommendations and natural supplements can both help treat and help prevent these conditions including ADD, ADHD, defiant disorder,

stomach issues, poor performance, lack of motivation, anxiety, low energy, and more including addictions and addictive behaviors.

**Information.** Like lab testing, your unique genetic profile provides information on what diet and what supplements will best support your DNA. This is called Nutrigenomics, the study and branch of genetic research of how foods affect our genes and how, in return, genetic variations affect the way we react to nutrients in food.

**Did you know?** FOOD is information that talks to your DNA. What is your food telling your body? Is your food (and supplements) giving good directions to your DNA? How do you know?

**Supplements:** Did you know that >70% of the supplements taken by people provide no biological effect for the person taking the supplement? That the food we eat and supplements we take regulates our gene expression?

### **Quotes from UC Davis Center of Excellence for Nutritional Genomics 5 Tenets**

- Common dietary chemicals affect **gene expression** or structure.
- Dietary influences on health depend on **genetic makeup** and biochemical individuality
- **Diet modulated genes** play a role in the onset, incidence, progression and severity of chronic disease.
- Dietary intervention based on knowledge of nutritional requirement, nutritional status and **genotype** can be used to prevent, mitigate or cure chronic disease
- Genetic Guided Nutritional Supplementation specifically addresses the unique biochemical deficiencies based on the individual's unique genetic make-up.

### **Example Tests**

**Pro 7 Flagship Genetic Test** (comprehensive and can add other panels at a substantial discount)

**Foundation | Methylation | Wellness Panel** (for athletes, potential athletes, low energy, depression, anxiety, longevity, DNA repair, delivery of nutrients ....)

**Immune | Auto-Immune | Inflammatory Panel** (science has identified 100 autoimmune diseases to date; inflammation is underlying cause of most chronic diseases, including autoimmunity, heart disease, hypertension, loss of cognitive function....)

**Neurological | Psych Panel** (depression, anxiety, ADD, ADHD, autism ....)

**Autophagy Panel** (key to longevity, self-cleansing, intermittent fasting, diabetes, insulin resistance ....)

**Traumatic Brain Injury | Post Concussion Panel** (applicable to adults and young, sports, auto and other accidents ....)

**Mike Clark** MBA, JD, PhD

Diplomate of Anti-Aging Medicine, ABHRT,  
Fellow of Anti-Aging, Regenerative and Functional  
Medicine, Certified Brain Health Coach, GX Trainer  
GX Provider, Certified in Nutrigenomics & Weight Management

### **Example Testimonials**

Since starting my preventive medicine practice I have incorporated GX Sciences nutrigenomic testing. I have seen several patients with a symptom complex that I would not have a solution for by merely taking a good history, doing a physical exam and checking appropriate lab work including hormones. Using nutrigenomic testing and finding certain gene polymorphisms I was able to formulate a cost effective plan to address the consequences of their SNP's . The physician trainer, Mike Clark, was available to help interpret the testing results and further my education about nutrigenomic testing and the utility in helping my patients

**Henry Martin Jr, MD**

**Doctor, Cardinal Age Management Medicine Institute, CAMMI**

I appreciate Mike Clark's guidance and knowledge with interpretation of the GX Sciences nutrigenomics tests. This field is vast and ever-changing and Mr. Clark can summarize the importance and relationship of the SNPs as we specifically talk about the symptoms and imbalances with my clients. I have also appreciated the vast description and references he provides for the individual SNPs as well as the information about Neurobiology products that may be supportive for my clients. Lastly, that my client's information is safe and protected holds great value for me as a provider.

**Jennifer Musiol, Nurse Practitioner**

**To Whom It may concern:**

I met Mike Clark during a Transformation Enzymes annual conference early this year. He was manning a booth for GXsciences. GXsciences is a lab in which a physician can utilize to acquire knowledge of gene SNPs and interpretation of their patients' nutritional needs. At the present time, GXsciences performance is head and shoulder above all other labs. The test results are precise, broad base, but thorough to insure a proper scan of your patient's gene anomalies. I would strongly recommend this lab service for

building your practice by the means of; developing a direct precise treatment protocol for your patients, remove speculating nutritional support, and acquire faster results to your most complex cases.

The major factor for such superior action is this gentleman, Mike Clark. The support system he provides to the beginner is massive. His knowledge in gene interpellation and product protocol is invaluable. His tutoring skills and reading recommendation are exemplary. Mike will review your cases via phone and internet. The personal interaction and his insights are great for you and your patient. The knowledge I have gained, by Mike's support, in a short period of 90 days would be measured approximal 18 months or better if I were to attend seminars, webinars and or basic research. You want him on your team.

My association with Mike and GXsciences it has been professional, eye opening, alongside learning new treatment protocols and best of all, it has brought the fun back into my practice. I strongly recommend GXsciences and Mike Clark without any reservations.

**Dr. Art Copes D.N.M. PH.D.**

Dr. Clark. Dr. Brian Brown here. We went over my results about 6 wks ago, and I have felt like a million dollars. I think I am going to increase my Methyl-B12 Injections from 5,000mcg twice weekly to 7,500mcg twice weekly. The Focus Factor and 5HTP were spot on! I just wanted to give you some feedback, tell you thank you, and Happy Thanksgivings.

**Brian Brown, MD**

As the medical director of Natural Bio Health for 9 years and practicing medicine now 52 years, I was introduced to gene testing about a year ago by Mike Clark. Having reviewed all the available panels and performing over 75 various gene testing, it has become evident to me that every patient in my practice should have their genes tested....

The cost of the gene testing has become a non-issue for patients when they are shown the value that it will bring. Often, when a family member is tested and he or she now sees the value of the testing, several other family members are then tested....

For training and support, in addition to the online training, I highly recommend all providers take advantage of the personal training offered by Mike Clark. He not only goes over with you any panel you might order but he also provides his Summary reports with a recommended treatment plan. Mike also sends various articles and references materials that relate to the Genetic testing.

**Joseph R. Feste, MD, FACOG. AACG. AACS**
